

TRANSATLANTIC SUMMER SCHOOL

8 — 12
June 2026

Personalized Medicine × AI Innovations

June 12

Friday

09:00 – 10:30 **The Pen and the Algorithm**

NextAI — This workshop explores artificial intelligence methods and tools for scientific writing, from structuring to language editing. It also addresses the fundamental ethical issues related to the use of AI in scientific communication, from transparency to academic integrity.

11:30 – 12:30 **La conversation continue**

Centre de recherche en Santé Publique — The program concludes with a light meal and an informal networking session, providing an opportunity to continue the discussions, celebrate five days of collective learning, and strengthen the bonds formed throughout the week. A final moment together, before everyone heads home with new ideas, new collaborators, and a transatlantic community to support them moving forward.

12:30 – 15:30 **Workshop* — Knowledge Graphs and Decision Support in Family Medicine**

Collège des médecins du Québec / NextAI — This workshop explores how knowledge graphs power clinical decision support tools in family medicine and how to rigorously evaluate them, taking into account their strengths, limitations, and biases. It equips participants to approach these technologies critically, keeping clinical judgment and the patient's reality at the heart of practice.

** Workshop requires separate registration
Reserved for registered physicians.*
